Lambda

Vector Pro
Quickstart Guide

Vector Pro

Last updated November 8, 2024

// 01
What's Included

1. Vector Pro workstation
2. Power cable
3. Wi-Fi antenna
4. Lambda swag
5. Quickstart guide

// 02
Getting Started

To set up the Vector Pro, connect your monitor, keyboard & mouse, wired network, Wi-Fi antenna (if included), and power cable. You also need to remove the Instapak foam used to protect your Vector Pro during shipment.

Note: Ports on your Vector Pro may be arranged differently than pictured.

// 03
Removing the Packaging Materials

You must remove the Instapak foam from inside the Vector Pro before using it.

1. Unscrew the two thumbscrews **A** on the right side of the system and pull it towards the rear about an inch.
2. Remove the side panel by pulling it toward the rear of the chassis.
3. After removing the side panel, remove the Instapak from inside the chassis.
4. Replace the panel and thumbscrews.

// 04
Connecting Your Monitor

Before booting the Vector Pro, connect your monitor to a DisplayPort on the Vector Pro's topmost GPU **F** using a DisplayPort cable.

Note: If your monitor has only HDMI inputs, you need to use a DisplayPort-to-HDMI adaptor cable to connect the monitor. The male end of the DisplayPort adaptor must be plugged directly into the GPU. You can then plug an HDMI cable from your monitor into the female end of the adaptor. You cannot plug an HDMI-to-DisplayPort adaptor into your monitor with a DisplayPort cable running between the adaptor and GPU, because adaptors are unidirectional.

▭ Display port   ▭ HDMI port

// 05
Connecting Your Wired Network

Connect to your wired network by plugging one end of an ethernet cable into your router, switch, or jack designated by your network administrator. Plug the other end of the ethernet cable into an ethernet port **E** on the back of your Vector Pro.

Note: Each ethernet port on your Vector Pro has a unique MAC address. Make sure to plug the cable into the port that has the same MAC address that your network administrator authorized for access.

// 06
Connecting Your Keyboard & Mouse

Connect your keyboard & mouse to any available USB ports **D** on your Vector Pro, including the front USB ports.

// 07
Connecting Your Wi-Fi Antenna (if included)

If you purchased your Vector Pro with onboard Wi-Fi, connect the included antenna to the connectors on the rear of your Vector Pro.

// 08
Connecting Your Power Cable

Connect your Vector Pro's power supply unit (PSU) **G** directly to a power outlet using the included cord. Ideally, the power outlet is on a dedicated circuit. Make sure your PSU is switched to the | (on) position.

Note: Do not use a power strip, surge suppressor, or uninterruptible power supply (UPS or battery backup).

Legend

A Thumbscrews
B Management ethernet port
C VGA port
D USB ports
E Ethernet ports
F Topmost GPU
G Power connector
H Power switch
